

This research  the relationship between burnout, school satisfaction and life satisfaction as children and adolescents get older, an aspect which is not so talked about in literature.

Methodology: survey among 3460 students.

The tools used in the research were:

-  *School-Burnout Inventory (SBI)*
-  *Student Life Satisfaction Scale (SLSS)*
-  *Overall Life Satisfaction (OLS)*

The research  in 31 schools in Bihor County, 18 of which are in urban environments (67.6% of students) and 13 in rural environments (32.4% of students). The study gathered  aged between 10 and 19.

Main results:

 There is a threshold around age 12, that once surpassed, will introduce the child in an age category where changes happen.

 Between ages 10 and 12 the burnout and life satisfaction evaluation scores were similar, and after this age they change.

 **OLS** drops slightly with age.
