

The aim of this article is to  the level of involvement of Romanian older persons in **volunteer activities** and **lifelong learning**, as well as the factors that restrict their participation.

**Methodology:** survey among 802 older persons (> 65 years old) from Romania

 The questionnaire was applied using the **CAPI** method.

 The application used was **VoxCo**.

 Data collected were analysed using IBM **SPSS** Statistics 21.

We consider  educational institutions, long-term care providers & social services providers  defining an adequate **strategy to improve** participation of older persons in volunteer and learning activities.

## Main results:

-  Volunteering & lifelong learning involvement remain very low among RO older persons.
-  In our study, almost none of the respondents did not participated in volunteering activities.
-  Among older persons that attended lifelong learning courses, male respondents had a higher participation rate than females.
